(57) Abstract :

The photocatalytic splitting of water would be an almost ideal process for converting earth abundant solar energy into a usable fuel ecologically acceptable. In the hunt for effective photocatalysts, here in, we reported borophene quantum dots-TiO₂ nanocomposite photocatalysts preparation method and its photocatalytic hydrogen production activity. The photocatalysts consist of TiO₂ scaffolding with 2.5wt% to 5wt% of borophene quantum dots and its optical properties and hydrogen production activity were disclosed
